## EDUCATION

<b>Washington University in St. Louis</b> <i>Doctor of Philosophy in Computer Science</i>	St. Louis, MO (Anticipated May. 2028)
<b>Washington University in St. Louis</b> <i>Bachelor of Science in Computer Engineering, Master of Science in Cybersecurity Engineering</i>	St. Louis, MO Aug. 2020 – May 2023
<b>DePauw University</b> <i>Bachelor of Arts</i>	Greencastle, IN Aug. 2017 – May 2020

## EXPERIENCE

<b>Graduate Research Assistant</b> <i>Washington University in St. Louis</i>	May 2022 – Present St. Louis, MO
<ul style="list-style-type: none"><li>Research focuses on <b>system security and cyber-physical systems</b>.</li><li>Conducted IoT devices firmware update pipeline vulnerability study. Validated 150 firmware images from 33 device families, leading to the discovery of both <b>zero-day and n-day</b> vulnerabilities. Our findings were disclosed responsibly, resulting in the assignment of <b>25 CVE IDs and one PSV ID</b></li><li>Developed experimental Linux scheduler enforcer for <b>timing violation detection and mitigation</b> with an <b>average performance overhead of only around 2.8%</b>.</li><li>Performed sensitive analysis on Linux perf counters, assisting offline CPU performance profiling.</li><li>Optimization on communication cost of Federated Learning. Reducing communication cost by <b>30%</b> while maintaining training accuracy of <b>95%</b>.</li></ul>	
<b>C++ Backend Development Intern</b> <i>Yume.im</i>	July 2020 – Sept. 2020 Shenzhen, China
<ul style="list-style-type: none"><li>Developed an <b>end-to-end encryption module</b> for audio and video real-time communication</li><li>Integrated the encryption module into the cross-platform compilation build workflow</li><li>Utilizing optimization techniques to ensure <b>low-performance overhead</b> for encryption and decryption.</li></ul>	

## PROJECTS

<b>Federated Learning Optimization</b>   <i>Machine Learning, Federated Learning, Python</i>	Aug 2024 – Dec 2024
<ul style="list-style-type: none"><li>Developed adaptive machine learning protocols for predictive modeling in distributed environments, leveraging advanced statistical techniques and Python libraries such as <b>Pytorch, pandas, and NumPy</b>. Reducing communication cost by <b>30%</b> while maintaining training accuracy of <b>95%</b></li><li>Conduct an empirical study on communication cost for federated learning.</li><li>Designed and optimized data pipelines for processing large-scale distributed datasets. Adaptive gradient compression rate can reach up to <b>210x</b></li><li>Real-world FL simulation demonstrates the feasibility of the proposed approach.</li></ul>	

## PUBLICATIONS

<b>Your Firmware Has Arrived: A Study of Firmware Update Vulnerabilities</b> <i>USENIX Security '24</i>
Yuhao Wu, Jinwen Wang, Yujie Wang, Shixuan Zhai, <b>Zihan Li</b> , Yi He, Kun Sun, Qi Li, Ning Zhang
<b>Work-in-Progress: Measuring Security Protection in Real-time Embedded Firmware</b> <i>2022 IEEE Real-Time Systems Symposium (RTSS)</i>
Yuhao Wu, Yujie Wang, Shixuan Zhai, <b>Zihan Li</b> , Ao Li, Jinwen Wang, Ning Zhang

## HONOR AWARDS

<b>2022 Dean's Select PhD Fellowship</b> <i>Washington University in St. Louis</i>
Nominated for the 2022 Dean's Select PhD Fellowship at Washington University in St. Louis.
<b>Dean's List</b> <i>DePauw University</i>
Recognized on the Dean's List for 2017 and 2020

## TECHNICAL SKILLS

<b>Languages:</b> C/C++, Python, Java, JavaScript, HTML/CSS, VHDL, Assembly, SQL, PHP
<b>Frameworks:</b> React, Node.js, ROS, ROS2
<b>Developer Tools:</b> Git, Cmake, Docker, VS Code, Visual Studio, Eclipse, Wireshark, Xcode, Ghidra, Database Management Systems, Excel, Gazebo
<b>Libraries:</b> pandas, NumPy, Matplotlib, Tkinter, Pytorch
<b>OS:</b> Linux Kernel Programming, Kernel Scheduler, Kernel Network Stack
